ISSUE LIST

ISSUES

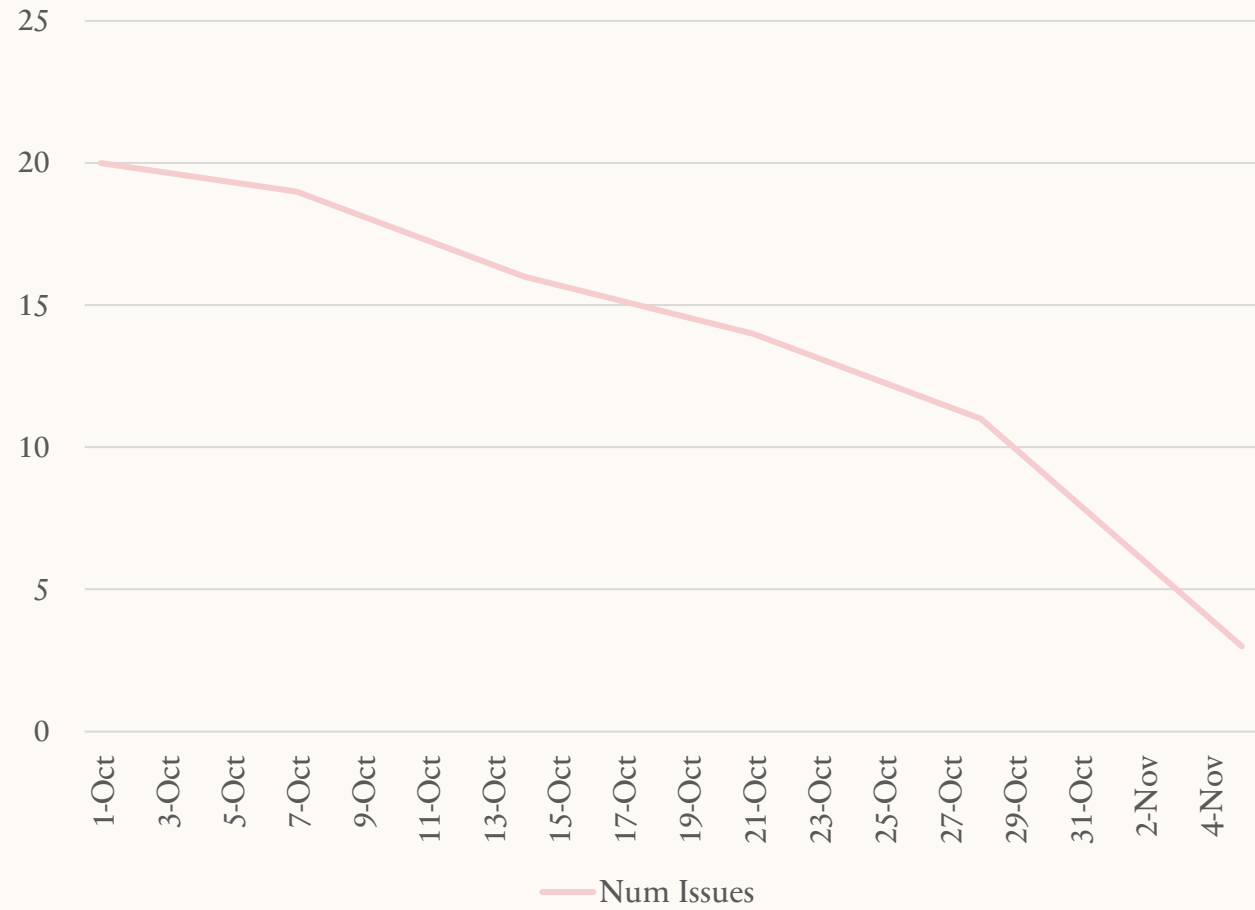

Issue	Resolved Date
Posts cannot be edited	10/24
Pictures do not upload	10/5
No likes and comments	10/19
Following does not work properly	11/1
No Chronological Feed	9/25
User Accounts do not work properly	9/23
Profiles do not exist	10/12

Issue	Resolved Date
User Bio does not exist	10/12
Users cannot follow each other	10/19
No following only feed	11/3
UI could be improved	(always room for improvement)
Some Images show up too big	10/31
Liking and following are links not buttons	11/6
User profile pictures do not work	11/2
Hosting does not work	10/30
No user search	10/12
Users cannot see their following/follower list	11/6
App not integrated with react	(discussed later)

Issue	Resolved Date
DMs have not been added	(Discussed later)
No site Logo	(Discussed Later)
No production Server	11/3
Production Server needs to save on updates	Needs Resolved

REMAINING ISSUES

UI COULD BE IMPROVED

UI has been improved slightly in the following ways

- Navbar has been improved
- Everything that should be a button is
- Moved some buttons to be more intuitive

Why is this issue not resolved?

UI I think is something that can always be improved, so has the UI improved from where it was? Yes, however I do not think that this is something I think we can always be improving.

APP NOT INTEGRATED WITH REACT

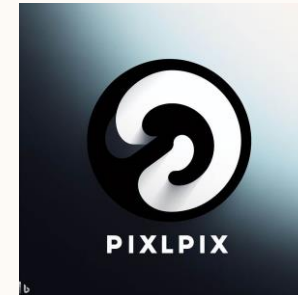

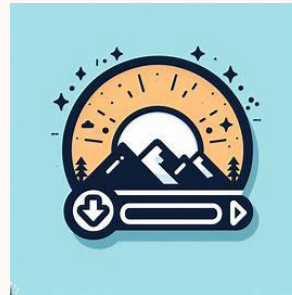

- After looking into having a react front-end with a Django back-end it is too far into the project to switch as there is not enough time remaining.

NO DM

While DMs would be a fun feature to add to the app, they were never actually in our initial feature list. It is a feature that is at the top of the list to add if we have enough time. It was initially slated as part of features that would be added after initial release.

NO SITE LOGO

We have created some mockups of logos using AI image generators; however we have not decided on one specifically yet. We could just use PixlPix in an interesting font as our logo as many tech companies do these days.

PRODUCTION SERVER

- When code is pushed to the repo, the production server does not save the photos uploaded before the push, so posts appear without an image.
- Can be fixed by saving into a json file then having the json file be saved then reuploaded on push

CUSTOMER FEEDBACK

EMILY

“PixlPix is a fun platform. It’d be even better if there was a way to post with just words”

KURTIS

“After some use, the overall use and feel is good. Things work like they should without issue. I think the login screen could be arranged differently to accommodate a phone vertical layout. I would also like to see how many comments are on a post.”

JASON

“The PixlPix website is an easy way to share and view pictures of friends. The interface is simple to use and understand. It quickly connected to my photo album and allowed me to seamlessly upload photos for friends to see. The ability to comment on others was great.”

ROWAN

“The UI was highly intuitive. All the basic functions of the website worked well. It was nice to look at, being a good color combination and good design.”

KIERAN

“I really like the way the site looks, its clean and not too much. The site ran well and the UI was easy to figure out”

CHANGES TO BE MADE AFTER CUSTOMER FEEDBACK

- UI tweaking on login page for mobile use
- Comment Count
